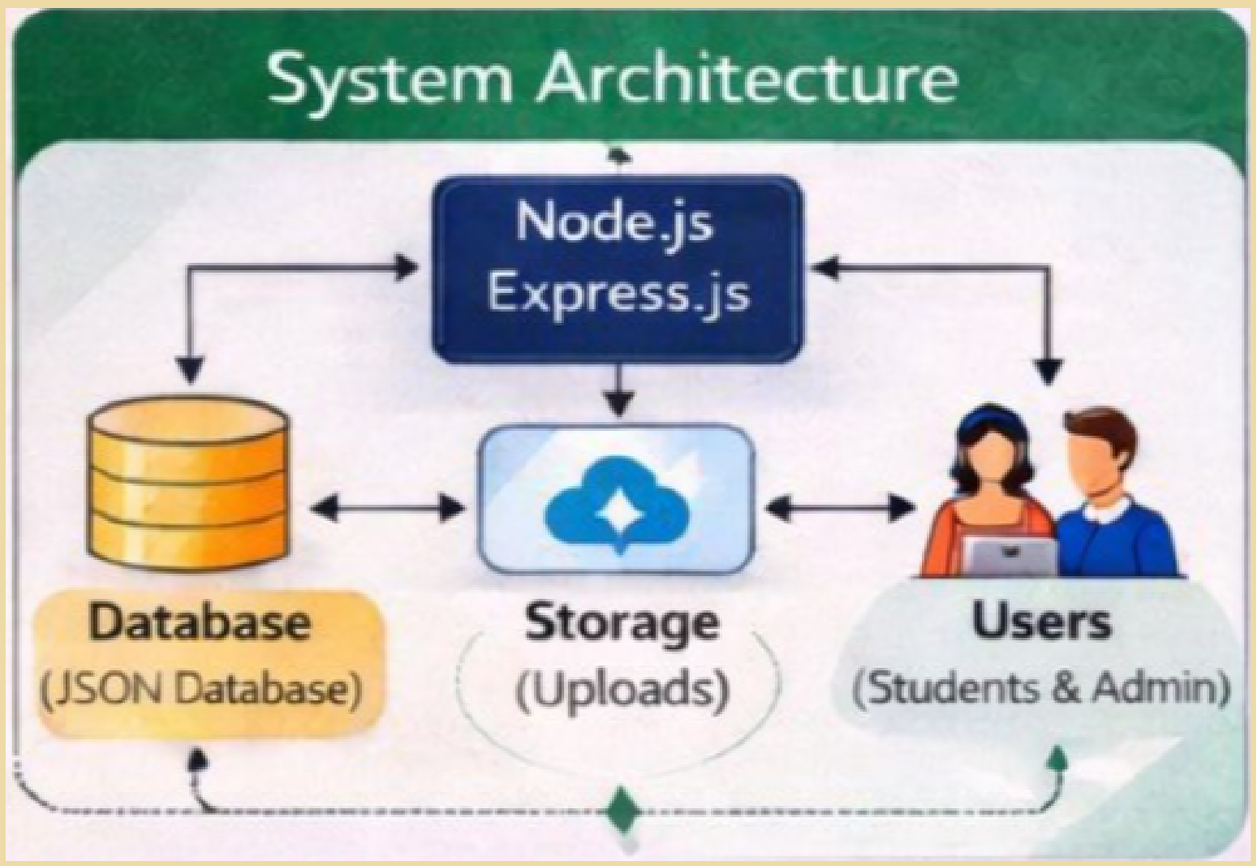
(DEEMED TO BE UNIVERSITY)

PROJECT BASED LEARNING FROM FWD

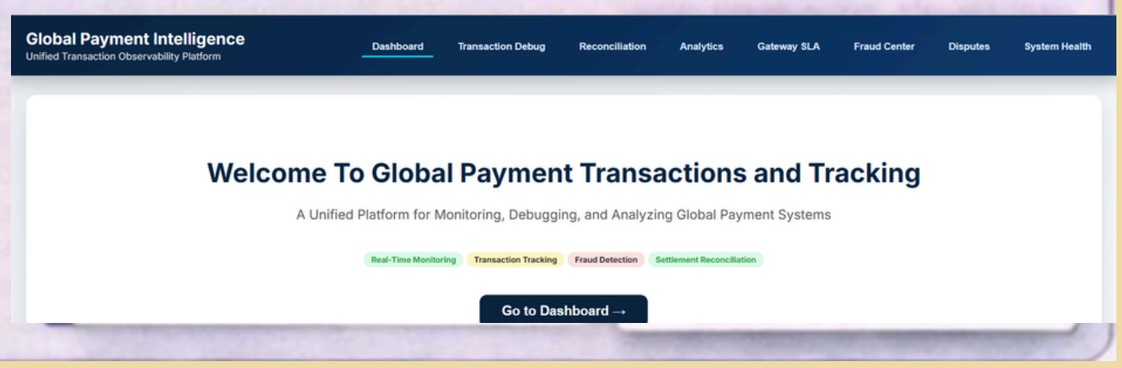
ABSTRACT

Global payment transactions involve multiple stages, intermediaries, and geographical regions, making them complex and difficult to track. Users often face challenges in understanding the current status of a payment, identifying delays, or knowing the reasons behind transaction failures. The lack of transparency in international payment flows can lead to confusion, reduced trust, and inefficiencies for individuals and organizations involved in cross-border transactions.



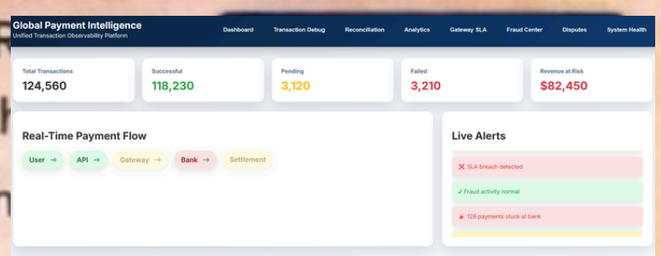
CO1 Internet Fundamentals, HTML & Introductory CSS

- Responsive Dashboard Design
- Semantic HTML
- CSS Flexbox/Layout
- Form Styling



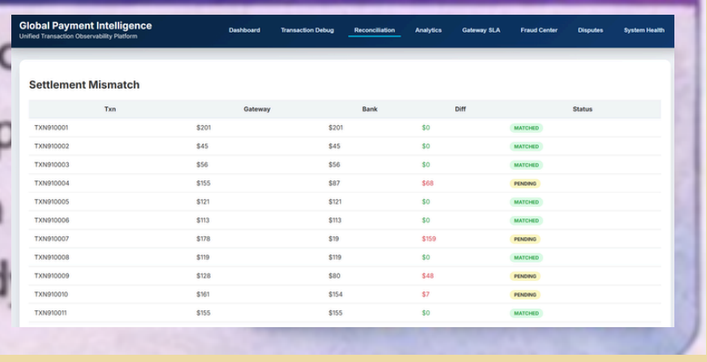
CO2 JavaScript Programming Essentials

- Interactive Star R
- Trending Algorith
- Bookmark & Com



CO4 Advanced Web Development & Deployment

- User Authenticatic
- RESTful API Endp
- Admin Panel with
- Deployment Read



Conclusion & Future Scope

- This project demonstrates **core web** development concepts, like responsive UI, form handling, interactivity, and backend integrations In future, the system can be expanded seamlessly and enhanced with AI-driven recommendations.
